

Wellbotics
Queen Game
Sample Cards

The cards are designed with visual dominance, relying on clear, vibrant illustrations and icons with minimal text to enhance appeal and understanding for young learners. Color-coding is used for quick identification of card types. The "Queen Bee" facilitator's guidance is integral for interpreting card actions and linking them to SEL concepts and reflections.

1. Collect Pollen Card: "Sunny Flower Pollen"

- Visuals:
 - Dominant image: A large, brightly colored, smiling yellow sunflower with glowing pollen motes around it.
 - Subtle cue: A small, happy bee or a cheerful hive symbol tucked in a corner of the card, subtly conveying positive impact.
 - Color Theme: Predominantly green to signify a positive, growth-oriented action.
- Action/Prompt (Text on card):
 - "Collect Sunny Flower Pollen!"
 - (Optional short phrase for facilitator): "Move Bee-Bot to a Yellow Pollen Tile."
- SEL Integration (Facilitator Guidance):
 - When this card is drawn and completed, the facilitator can narrate: "The hive feels happy and bright when you bring Sunny Flower Pollen!"
 - This action implicitly reinforces collaboration and the positive impact of individual contributions on the shared community's well-being, fostering social awareness and positive relationship skills.

2. Obstacle/Movement Limitation Card: "Tangled Vines!"

- Visuals:
 - Dominant image: A winding path or a Bee-Bot partially entangled in lush green vines, with a subtle "confused path" icon to indicate a need for extra programming steps.
 - Color Theme: Predominantly red to indicate a challenge or a stop.
- Action/Prompt (Text on card):
 - "Tangled Vines! Use 1 extra programming card this turn."

- (Optional short phrase for facilitator): "Oh no! Your Bee-Bot is stuck. Time to re-plan!"
- SEL Integration (Facilitator Guidance):
 - When this card is encountered, the facilitator can prompt: "Bumpy Road! It's tough, but don't give up! How will you strategize to keep going?". This directly addresses persistence.
 - For emotional regulation and debugging, the facilitator might say: "Frustration Station! It's okay to feel stuck. Take a deep breath. Can you re-program your Bee-Bot?". This connects to self-management.
 - If students are working in teams, the facilitator can emphasize: "Problem! How can you solve this with your team?" encouraging collaborative problem-solving.

3. Dance Card: "Happy Hive Dance!"

- Visuals:
 - Dominant image: A dynamic and expressive illustration of a Bee-Bot with a wide, happy emoticon face, performing a simple, joyous dance move (e.g., wiggling its antennae or doing a small hop).
 - Color Theme: Predominantly blue to denote a special, reflective, or expressive action.
- Action/Prompt (Text on card):
 - "Perform the 'Happy Hive Dance!'"
 - (Optional short phrase for facilitator): "Show your happy feelings!"
- SEL Integration (Facilitator Guidance):
 - The facilitator leads the simple movement sequence. After the "dance," the facilitator connects movement to emotional states and collective well-being: "Dance to show how you feel when the hive is strong! This is how we celebrate our teamwork!". Wellbotics aims to provide children with alternative ways to express feelings through robotics.
 - To encourage self-awareness and communication: "This is the 'Share Your News Dance!' Act out how you feel about collecting pollen. Can your friends guess what emotion you're showing?".
 - To reinforce collaboration and relationship skills: "Now, let's do the 'Teamwork Wiggle!' Work together to create a new move that shows cooperation!".
 - To introduce mindfulness practice: "For our next dance, let's try the 'Mindful Moment Dance!' Move slowly and notice your body. What does calm feel like when you move like this?".
